Dilutions to be used depend on detection system applied. It is recommended that users test the reagent and determine their own optimal dilutions. The typical starting working dilution is 1:10.

- FS: For neutralization of biological activity dilutions have to be made according to the amounts IFN-gamma to be inactivated.

General Information

Description	The antibody reacts with rat Interferon gamma (IFN-gamma) of both natural and recombinant origin. IFN-gamma is a pluripotent cytokine with important pro-inflammatory functions. The antibody inhibits the biological activity of natural and recombinant rat IFN-gamma. The antigen specificity was further assessed by ELISA and Western blotting. No cross-reactivities with other cytokines have been detected.
Aliases	Interferon gamma
