

## CERTIFICATE OF ANALYSIS – TECHNICAL DATA SHEET

**Product name** Clusterin, Human, mAb 4C7

**Catalog number** HM2436-20UG

**Lot number** -

**Expiry date** -

**Volume** 200 µL

**Amount** 20 µg

**Formulation** 0.2 µm filtered in PBS+0.1%BSA+0.02%NaN3

**Concentration** 100 µg/ml

**Host Species** Mouse IgG2a

**Conjugate** None

**Endotoxin** N.A.

**Purification** Protein G

**Storage** 4°C

### Application notes

	IHC-F	IHC-P	IF	FC	FS	IA	IP	W
Reference #

No								
N.D.	•	•	•	•	•		•	

N.D.= Not Determined; IHC = Immuno histochemistry; F = Frozen sections; P = Paraffin sections; IF = Immuno Fluorescence; FC = Flow Cytometry; FS = Functional Studies; IA = Immuno Assays; IP = Immuno Precipitation; W = Western blot

HM2436

W: Western blot (WB) using monoclonal antibody; 4C7. Proteins: Purified Clusterin standard was resolved on gel under non-reducing conditions

Dilutions to be used depend on detection system applied. It is recommended that users test the reagent and determine their own optimal dilutions. The typical starting working dilution is 1:50.

- W: W: Both reduced and non-reduced western blot can be used. The expected band size for non-reduced is 80 kDa and 40 kDa for reduced conditions.

---

## General Information

---

<b>Description</b>	<p>Mouse Monoclonal antibody #4C7 recognizes human clusterin, also called apolipoprotein-J. Clusterin from blood is a 80KDa heterodimeric glycoprotein implicated in regulation of several biological processes, like lipid transport, cell adhesion and complement regulation. It consists of two polypeptide chains linked by disulfide bonds. The protein is expressed in most tissues of the body. From its precursor different isoforms can be generated, each with its own function, as well intracellularly as extracellularly. Secreted clusterin is the most common isoform.</p> <p>Inhibition of complement by clusterin, together with vitronectin and CD59, protects host cells from complement destruction via membrane attack complex (MAC) mediated cell lysis. Clusterin prevents Zn<sup>2+</sup> induced binding of C9 to C5b-8 &amp; C5b-9 and prevents C5b-7 membrane attachment. Thereby preventing spread to nearby cells through the self-amplifying properties of the complement cascade. The lipid-like character of clusterin probably associates with the mechanism of prevention by clusterin of MAC incorporation into the cell membrane. Although the majority of proteins remains bound to the complex, this explains why a fraction of clusterin dissociates from sTCC in the presence of detergents. It has been describe that the amount of active heterodimeric clusterin is &lt;10%. Therefore, the degree of reduction of complement mediated cytolysis is dependent on the local conditions and opens a window of regulation in function and time and the role of other inhibitors herein.</p> <p>Besides its role in inhibition of complement mediated cell damage, it is associated with multiple diseases like Alzheimer's disease, atherosclerosis and autoimmune disorders. Antibody #4C7 can be used in western blotting and ELISA.</p>		
<b>Immunogen</b>	Native Clusterin purified by affinity chromatography		
<b>Aliases</b>	APOJ, CLI, KUB1		
<b>Gene</b>	Gene Name: CLU	Uniprot: <a href="#">P10909</a>	Entrez Gene ID: <a href="#">1191</a>

<b>Storage&amp;stability</b>	Product should be stored at 4°C. Under recommended storage conditions, product is stable for at least one year.		
<b>Precautions</b>	For research use only. Not for use in or on humans or animals or for diagnostics. It is the responsibility of the user to comply with all local/state and federal rules in the use of this product. Hycult Biotech is not responsible for any patent infringements that might result from the use or derivation of this product.
